The site includes a big dune complex, oak forests and abandoned cultivated areas on the hills. The slopes of the low mountain regions are calcareous ones.

4.2 Quality and importance

This is the longest beach on the Black sea coast with well preserved dunes. The site is important for the existing of invertebrate fauna. Motivation: A-protected plant by the Biodiversity Act B-included in the Red book of Bulgaria C-European list D-Balkan endemic species The site definitely is valuable because of the big number of plants with conservational status and comparatively good condition of their populations.
