N08	16.0
N16	58.0
N12	4.0
N19	17.0

Other Site Characteristics

The SCI includes the border area of the Middle Rhodopes. It contains untouched forests until recently: mainly beech forests. The SCI is the southeastern-most reproduction area of the Bear.

4.2 Quality and importance

The SCI is part of the habitat of the poorly known populations of Bear and Chamois on the Bulgarian Greek border. There are old beech forests inhabited by Capercaillies which is a unique habitat for the species.

4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site
