Other Site Characteristics

The site is localised in the valley of Dubnishka River, small tributary of Vit River. Now, the part of the river, between the villages Gorni Dubnik and Telish, is flooded by two big reservoirs - Gorni Dubnik I Telish. They, their banks and surrounding forests (oak and willow) are included in the site.

4.2 Quality and importance

Two big dams with a big importance for the nesting, migrating and wintering birds. The shores of the dams are muddy and are convenient for the habitat 3130, which has a good presence.

4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site

designated at national or regional level:

Type code	Site name	Type	Cover [%]
BG06	Pipra - Kaleto	+	0.043

5.3 Site designation (optional)

The territory is the most important in Bulgaria for the population of *Lindernia procumbens* - species from Annex IV of the Directive 92/43. The habitat 3130 is a very representative one. The dams are IBA and has bird's influence on the floristic structure of the habitats 3130. Many of the species within its floristic composition are transferring by the birds.

6. SITE MANAGEMENT

6.1 Body(ies) responsible for the site management:

6.2 Management Plan(s):

An actual management plan does exist:

<input type="checkbox"/> Yes
<input type="checkbox"/> No, but in preparation
<input checked="" type="checkbox"/> No

6.3 Conservation measures (optional)

The water and coastal habitats are with non-natural origin. The degree of the water level must be in conformity with the development of the habitat - the autumn.
