Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

The Nature Park includes the middle and high parts of West Rila mountain situated above 800 m. asl altitude. They characterise with well expressed alpine relief where during the period of the development of the earth's crust in its high parts - above 2200-2500 m altitude 28 circus lakes have been created. The territory of the Riski manastir Nature Park is one of the richest of water resources parts in Bulgaria.

4.2 Quality and importance

1. 94.8% of the forests in the Park are natural ones. The average age of the forests in the Park is 99 years while the average for the country is 45.2. Rilski manastir NP preserves 39% of the high plants species in Bulgaria and 30% of the bird species. The Park is shelter to 52 world endangered plant and animal species. From the plant species 6 are local, 27 Bulgarian and 90 are Balkan endemic species. 3. 203 species of medicinal plants are found on the territory of the Park and 38 species eatable mushrooms. 4. The Park is with the richest habitats diversity in Bulgaria and Europe. On small territory such as Rilski manastir NP are found 85 habitat types as 22 of them are endangered in European scale and they require specific protection measures according to the Habitats Directive of EU. 5. On the Park territory is the most significant group architecte, artistic, historical monument of the culture - The Rila Monastery.

4.5 Documentation

Initial proposal and description of the site made by eng. Vangel Avramov - Director of Rilski manastir Nature Park Directorate, dppriiski_manastir@nug.bg; St. Beshkov - NMNH, Sofia; Initially listed document - Management Plan of Riski Manastir NP Data revised by a team of Bulgarian Academy of Sciences (<http://www.bas.bg>). Data on birds provided by Institute for Biodiversity and Ecosystem Research, BAS and Dr. P. Shurulinkov, NMNHS. New data provided by project "Mapping and assessment of the conservation status of the natural habitats and species - Phase 1" (see link).
