Other Site Characteristics

There are embankment which follows the riverside of Ogosta. Only near the villages of Erden and Vladimirovo there are dams. The river bottom is with more alluvium and the water is more eutrophic. It is due to influence of Montana reservoir and the neighbouring town. Deposited alluvium and eutrophic water are reason for growth of Water courses of plain to mountain levels with the Ranunculion fluitantis and Callitriche-Batrachion vegetation (3260) and Rivers with muddy banks with Chenopodium rubri p.p. and Bidens p.p. vegetation (3270) which are habitats of European importance.

4.2 Quality and importance

Pannonian woods with Quercus pubescens *Between Portitovtzi and Murchevo villages there is old riverbed transformed in breeding-pond with two pools (basins). Towards Marchevo four small natural eutrophic lakes reedy with macrophytes exists. In addition to the rich plant societies there are a lot of birds. The complex of breeding pond, old river beds, the river valley with Alluvial forests with Alnus glutinosa and Fraxinus excelsior (Alno-Padion, Alnion incanae, Salicion albae) *(91E0) and Rivers with muddy banks with Chenopodium rubri p.p. and Bidens p.p. vegetation (3270) must be included in a protected area. Near the village of Vladimirovo on the right riverbank (riverside) begins high slope with (91H0) Pannonian woods with Quercus pubescens where valuable medicinal plant Paeonia peregrina was found. Detailed exploration and protection is needed.
