PF: for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.

NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

3.3 Other important species of flora and fauna (optional)

Other Site Characteristics

The SCI includes most of Sushtinska Sredna Gora Mountain, the eastern part of Ihtimanska Sredna Gora Mountain and the rocky gorge of river Topolnitsa, south of Petrich village, linking the two. Old beech and oak forest have been conserved here, that are large homogeneous area far from human settlements. This is the most appropriate territory for expansion of the Bear distribution.

4.2 Quality and importance

The pSCI protects a territory inhabited constantly by several bears, but also has great potential for reintroduction of the species in a large area. This will increase considerably the Balkan Range population and will give good opportunities for genetic exchange with the other Bulgarian population - the Rilo-Rhodopean. The site is one of the few remaining viable populations of land tortoises in the mountains surrounding upper Trakia plane. The site protects important habitats for
