- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

## 4. SITE DESCRIPTION

### 4.1 General site character

[Back to top](#)

Habitat class	% Cover
N22	100.0
Total Habitat Cover	100

### Other Site Characteristics

The cave is situated in "Lozeto" area. The entrance is big : 10X10 metres. The solitary gallery is high and wide with some lateral halls. It is 800 metres long. It's rich of beautiful secondary carst forms - stalactites, stalagmites, stalactones, helictits and anomal forms.

### 4.2 Quality and importance

There are data about local endemic water and terrestrial unvertebrate cave fauna and a new species is described from there- crustacean from the genus of Stygoelaphoidella. There are tertial relicts from the genera Speocyclops and Niphargus. The cave is important winter refuge of Rhinolophus bats. Some bats as *Miniopterus schreibersii* , *Myotis myotis* and *Myotis blythi* are breeding there.
