### Other Site Characteristics

A complex of wet meadows and pastures, located on flat or slightly sloping terrain around the Vidima river and its tributaries in the region of the town of Apriltsi, in the foothills of the Central Balkan Mountain and the Central Balkan National Park, about 30 km south-east of the town of Troyan. The meadows are overgrown with mesophyle grass vegetation with prevalence of Agrostis capilaris, Festuca rubra, Cynosurus cristatus, etc. (Bondev, 1991).

### 4.2 Quality and importance

Apriltsi meadows are of international importance for the conservation of the globally threatened Corncrake Crex crex, breeding there in considerable numbers. The area is not sufficiently studied for the rest of the bird species occurring there.
