Other Site Characteristics

The site covers mainly wet meadows and pastures in south-western Bulgaria, south of the town of Boboshevo. It includes the eastern slopes of the Vlahina mountain and Piyanets ridge above the Struma. Its territory stretches from the villages of Vukovo, Dobrovo, Sopovo and Boboshevo on the north to Buchino on the south. Its western limit passes through the mountain tops and its eastern beyond Boboshevo and the villages of Dragodan, Borovets, Buranovo and Krumovo. There are several types of habitats on the sites territory, but most important for the national Ecological Network are the wet meadows and pastures on the mountain slopes.

4.2 Quality and importance

Boboshevo meadows are of global importance for the conservation of the Corncrake *Crex crex*, which breeds there in numerous population.
